Python for Data Science Practical

Practical - I

Roll No. : S002	Name: Ansari Kaif
Class : SY.BSC.IT	Batch : 1
Date of Assignment : 15/07/2026	Date/Time of Submission : 15/07/2026

1a. Write a python code to print your profile.

Input:-

```
File Edit Format Run Options Window Help
# Input details from user
name = input("Enter your name: ")
age = input("Enter your age: ")
roll_number = input("Enter your roll number: ")
phone_number = input("Enter your phone number: ")

# Display profile
print("\n----- PROFILE -----")
print("Name          :", name)
print("Age           :", age)
print("Roll Number   :", roll_number)
print("Phone Number  :", phone_number)

print("kaif S002")
```

Output:-

```
===== RESTA
Enter your name: Kaif Ansari
Enter your age: 19
Enter your roll number: 123498765
Enter your phone number: 987654321

----- PROFILE -----
Name          : Kaif Ansari
Age           : 19
Roll Number   : 123498765
Phone Number  : 987654321
kaif S002
>
```

1b. write a python code to print addition of two numbers.

Input:-

```
File Edit Format Run Options Window Help
# Input two numbers from the user
num1 = float(input("Enter first number: "))
num2 = float(input("Enter second number: "))

# Calculate addition
sum = num1 + num2

# Display the result
print("The sum is:", sum)

print("kaif S002")
```

Output:-

```
=====
Enter first number: 4
Enter second number: 3
The sum is: 7.0
kaif S002
|
```

1c. Write a python code to print square root of number.

Input:-

```
File Edit Format Run Options Window Help
import math

# Input a number from the user
num = float(input("Enter a number: "))

# Calculate square root
square_root = math.sqrt(num)

# Display the result
print("The square root of", num, "is", square_root)

print("kaif S002")
```

Output:-

```
===== R
Enter a number: 25
The square root of 25.0 is 5.0
kaif S002
>
```

1c. Write a python code to calculate area of Triangle.

Input:-

```
File Edit Format Run Options Window Help
# Input base and height from the user
base = float(input("Enter the base of the triangle: "))
height = float(input("Enter the height of the triangle: "))

# Calculate area
area = 0.5 * base * height

# Display the result
print("The area of the triangle is:", area)

print("kaif S002")
```

Output:-

```
===== RESTAR
Enter the base of the triangle: 10
Enter the height of the triangle: 5
The area of the triangle is: 25.0
kaif S002
|
```

1d. Write a python code to swap two variables.

Input:-

```
File Edit Format Run Options Window Help
# Input two variables from the user
a = input("Enter first value: ")
b = input("Enter second value: ")

# Swap using a temporary variable
temp = a
a = b
b = temp

# Display the swapped values
print("After swapping:")
print("First value =", a)
print("Second value =", b)

print("kaif S002")
```

Output:-

```
=====
Enter first value: 10
Enter second value: 20
After swapping:
First value = 20
Second value = 10
kaif S002
|
```
